VITÀ INTERNO®

For natural, in-depth colour effects

Outstanding results can be obtained with Interno ceramics, particularly when reproducing colour effects (contrasts) occurring in the incisal area of natural teeth.

Their high fluorescence means shades with increased luminosity and even better light transmission - just as in natural dentition.

VITA Interno ceramics can be mixed with dentine and translucent porcelains. This intensifies the chromatic effect.

In special cases the Interno ceramics can be used to create an additional impression of depth when space is lacking.

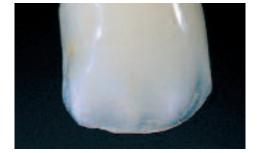

Study on natural teeth:

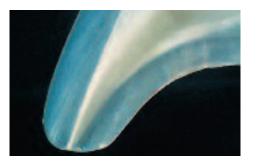

Typical shade reflection on the incisal edge

Clearly visible internal structures in the dentine of a natural tooth after removing the enamel layer

The cross-section illustrates the diversity of colour effects within the dentine

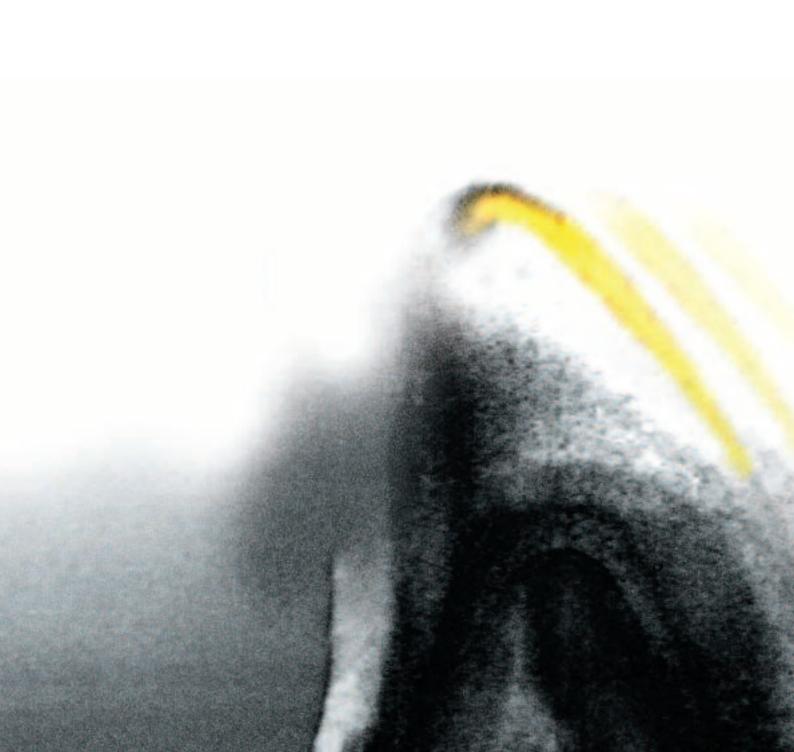

Example of the application of a mixture of Interno and transparent porcelain to imitate orange incisal shading.

The Interno mixture should be "washed" into a well-moistened ceramic. It is also important to make sure the Interno ceramics are inlaid or "washed in" only in a very thin layer.

Observations on natural dentition.
The intense luminosity of the
Interno ceramics matching the
highly fluorescent effect of
natural teeth:

Fluorescence of a SPINELL crown with Interno ceramics in the VITADUR ALPHA layering technique

Bright reflection in a natural tooth – this is revealed by the facet.

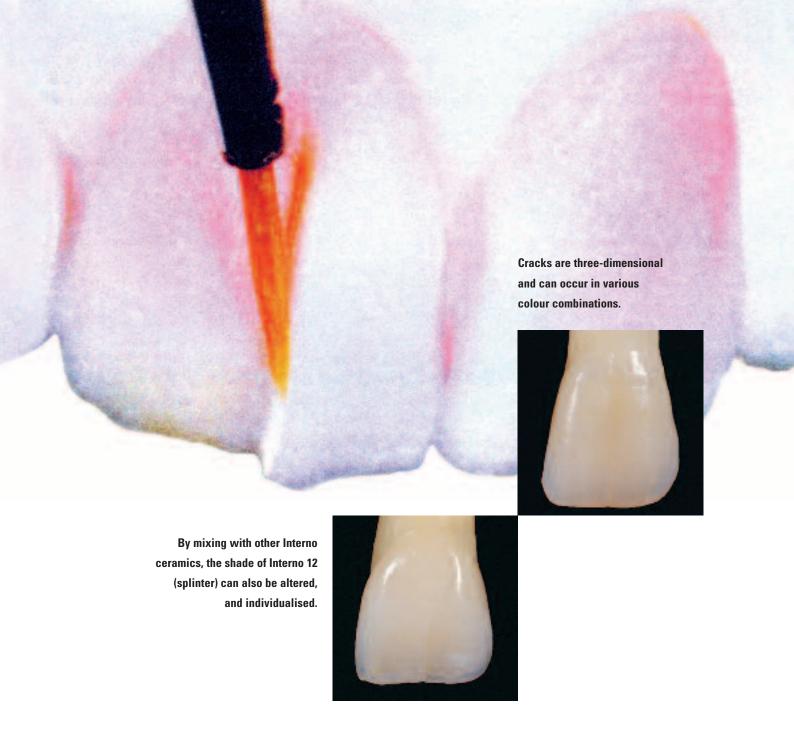

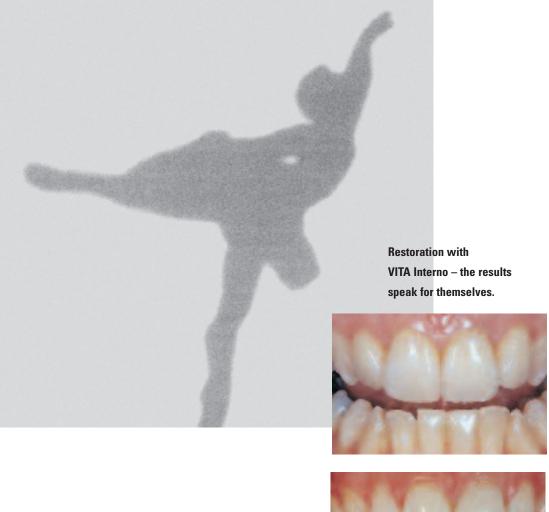

The Interno ceramics demonstrate remarkably lifelike interdental and incisal effects in the lateral incident light.

The VITA Interno ceramics were developed and created in close co-operation with the ceramist Claude Sieber, Basle/Switzerland. The concept of this brochure bears his stamp,

the photographs and patient cases portray his

philosophy.

The VITA INTERNO® Assortment contains

terno ceramics	Int 01 - Int 12	12 x 5 g
terno FLUID		1 x 20 ml
zent/Interno mixing plate		1 piece
ass spatula		1 piece
& e brush No. 3/0		1 piece
de sample blade		1 piece
orking instructions	No. 770 E	1 piece

VITA INTERNO® Working Instructions

Area of applications

The porcelains of this assortment are shaded according to the anomalies occurring in natural teeth. These porcelains enable the user to reproduce natural shade effects and obtain an even more perfect match of ceramic restorations to natural teeth. VITA Interno porcelains can be used with all types of ceramic techniques, i.e. VITA VM 13, VITA VM 7, VITA VM 9, VITA VM 15, the VMK 95, OMEGA 900 Metal Ceramics and VITA TITANIUM PORCELAIN.

These stains, however, are not intended for shading opaque materials.

Properties

The Interno porcelains are fine-grained and slightly fluorescent and are distinguished by their shade intensity. It is possible to mix these with one another. They can be used either on their own or mixed into opaque dentine, dentine, enamel and translucent porcelains.

Working procedure

When mixed with opaque dentine, the VITA Interno porcelains increase the fluorescence and natural luminosity of a ceramic restoration in varying light conditions. When Interno porcelains are mixed with dentine, the shade character of the porcelain can be altered. The Interno/dentine mixture (Int 01-03 and Int 09) is particularly suitable for mamelon effects. Due to their fine-grained structure, the Interno porcelains are also very suitable for washing into the dentine or opaque dentine in their unmixed state to achieve in-depth shade effects.

A mixture of translucent and Interno porcelains (e.g. Int 01, Int 03, Int 08) enhances the translucent effect in the incisal area. Using the Interno porcelain Int 12 (splinter), either on its own or mixed with other Interno porcelains, it is possible to reproduce natural enamel cracks. The Interno porcelains Int 10 and Int 12 have no fluorescene; these are particularly suitable for reproducing the brownish discolorations resulting from dentine hardening in abraded teeth. The firing temperature is that of the dentine firing of the material used.

Important

When grinding dental ceramic products it is necessary to use suction unit, wear a dust mask or keep the workpiece wet.

Recommended firing:

VITA VM⊕7	Pre- drying	min.	min.	°C/min.	Temp. ap- prox. °C	→ min.	VAC min.
Dentine firing	500	6.00	7.27	55	910	1.00	7.27

VITA VIM ⊛ 9	Pre- drying	→ min.	min.	°C/min.	Temp. ap- prox. °C	→ min.	VAC min.
Dentine firing	500	6.00	7.27	55	910	1.00	7.27

VITA VIM ₃13	Pre- drying	→ min.	min.	°C/min.	Temp. ap- prox. °C	→ min.	VAC min.
Dentine firing	500	6.00	6.55	55	880	1.00	6.55

VITA VM⊚15	Pre- drying	→ min.	min.	°C/min.	Temp. ap- prox. °C	→ min.	VAC min.
Dentine firing	400	6.00	8.00	50	800	1.00	8.00

VITA VMK®95	Pre- drying	→ min.	min.	°C/min.	Temp. ap- prox. °C	→ min.	VAC min.
Dentine firing	600	6.00	6.00	55	930	1.00	6.00

VITA OMEGA 900	Pre- drying	→ min.	min.	°C/min.	Temp. ap- prox. °C	→ min.	VAC min.
Dentine firing	600	6.00	6.00	50	900	1.00	6.00

VITA TITANKERAMIK	Pre- drying	→ min.	min.	°C/min.	Temp. ap- prox. °C	→ min.	VAC min.
Dentine firing	400	6.00	7.00	53	770	1.00	8.00

Please note: Our products have been developed for the use in the dental sector and have to be processed in accordance with the directions for use. Illustrations and written information do not include any undertaking as to qualities and are not binding. After the publication of these working instructions any previous versions become obsolete.
